A particular website? No, not really. The game is built on that engine and if that part crashes (which, however, is unlikely), the game shuts down. That said, I tried the "exit game" command and it showed the message "nope" in the first line of the resulting text file. This means that the game exited normally. Q: How to merge a set of values with map using reduce Can someone please give me some pointers on how to merge values in a map using reduce? I have a map as follows: Map>> I would like to write a function that will merge those maps into a single map. For example, I would like to combine the first, second and third map, to return a single map: Map> Doing the following: Map>>> mergedMap = initialMap.reduce(new Function2() { @Override public Object call(Object v1, Object v2) throws Exception { return v1; } }, new Function() { @Override public Object call(Object v1, Object v2) throws Exception { return v1; } }, new Function2() { }); But I have 82157476af
