This allows for data migration and database backup capabilities. The Migrate to Database Software (MTS) program can migrate data from one Oracle Database 11g release to another Oracle Database 11g release. . The MTS program provides data migration and database backup capabilities. It is designed to provide the quickest means of performing data migration and database backup from a stand-alone version of Oracle Database 11g release to another release. For example, after the MTS program is run, an Oracle Database 11g release 2 release user would have the same applications and databases as an Oracle Database 11g release 1 release user. The MTS program can: Migrate data to a different Oracle Database release Migrate data from a stand-alone release of Oracle Database 11g release 2 to a release of Oracle Database 11g release 1 Migrate data from a stand-alone release of Oracle Database 11g release 2 to a release of Oracle Database 11g release 2 Migrate data from a stand-alone release
